RCP2-1200 Redundant Controller

DESCRIPTION

The LNB Series Low Noise Block Down Converter Systems provide the ultimate system reliability by providing complete back up operation. The LNB series redundant system utilizes the RCP2-1100 redundant controller to provide fault detection and switchover in the event of a Low Noise Block Down Converter failure.

Teledyne Paradise Datacom can provide dual 1:1 redundant systems, 1:2 redundant systems, and a wide variety of custom systems. The outdoor equipment consists of the switch plate assembly and the Low Noise Block Down Converters and associated components. The controller provides complete visual indication of switch position, fault detection, and system status.

FEATURES

- Reliable, weather sealed outdoor equipment
- Manual or Automatic Switchover on fault
- 1 Rack Unit high indoor controller
- 1:1 or 1:2 system configurations
- Standard 100 ft. (30m) control cable
- Universal input AC power supply on controller
- LNB bias supplied by indoor controller

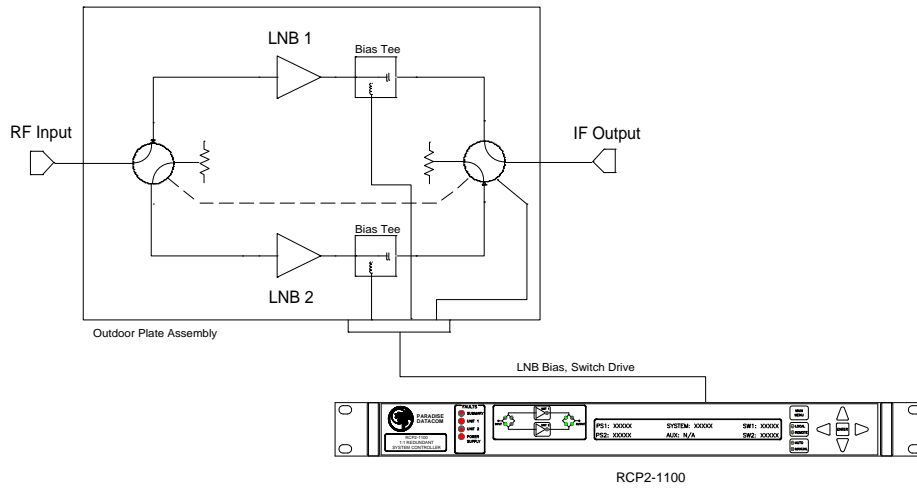

OPTIONS

- TX Reject Filters
- Offline Input Coupler
- Internal or External reference
- Offline & Test Ports
- Custom frequency bands

SPECIFICATIONS

- IF Output Frequency:
950-1750 MHz C-Band;
950-1450 MHz X-Band;
950-1450 MHz Ku-Band
- Conversion Gain: 55-70 dB
- Input/Output VSWR: 2.2:1
- Spurious: -50 dBc
- Input Power (+15 to +24 VDC):
350 mA max C-Band;
200 mA max Ku-Band
- Output Power (P1dB):
+5 dBm C-Band;
+5 dBm X-Band;
+5 dBm Ku-Band

OEM LNB Operation

Teledyne Paradise Datacom LNB systems are configured with OEM LNBs, which are powered by +15 VDC current through the control cable, provided via the RCP redundant controller (if ordered with the system).
