

150W Ku-Band Compact Outdoor 1:1 Redundant System

## DESCRIPTION

Teledyne Paradise Datacom's Outdoor series of redundant amplifier systems provide the highest degree of earth station redundancy and reliability. Based on Teledyne Paradise Datacom's family of rugged and robust SSPAs, these systems provide the highest MTBFs possible.

These systems can be configured in either 1:1 or 1:2 redundant configurations using any of the Teledyne Paradise Datacom family of Outdoor SSPAs. The RCP2-1100/1200 Redundant Controller provides an extremely user-friendly interface for complete monitor and control of the high power amplifiers in either 1:1 or 1:2 configurations.

The RCP front panel mimic display shows the on-line amplifiers and the current switch positions. Dedicated fault lights provide easy indication of system status. All RCP2-1X00 monitor and control is available locally, at the front panel LCD display, as well as remotely by the RS-232 or RS-485 interface ports.

## FEATURES

- System Output Power to:  
1000W S-Band;  
800W C-Band;  
800W X-Band;  
400W Ku-Band
- Universal Input, Power Factor Corrected Power Supply
- Output Power Monitoring
- Separate 1RU Redundant Controller or Controller-less configurations

## OPTIONS

- System Output Power Monitor
- Reflected Power Alarm
- L-Band Input Operation
- Cold Standby Amplifier Operation
- Custom Configurations

### High Power Outdoor Output Power Ranges

Band	GaAs (W)	GaN (W)
S-Band	N/A	600 - 1kW
C-Band	400 - 600	650 - 800
X-Band	350 - 500	650 - 800
Ku-Band	200 - 250	300 - 500

See document # 214164 for GaAs High Power Outdoor SSPAs, and document # 211669 for GaN High Power Outdoor SSPAs

### Compact Outdoor Output Power Ranges

Band	GaAs (W)	GaN (W)
S-Band	N/A	50 - 500
C-Band	30 - 300	300 - 400
X-Band	25 - 250	300 - 400
Ku-Band	10 - 125	100 - 250

See document # 205485 for GaAs Compact Outdoor SSPAs, and document # 209555 for GaN Compact Outdoor SSPAs

### System Output Power Capacity

Due to residual losses inherent in redundant system configurations (waveguide bends; switch and coupler losses), reduce the typical output power specification of a single amplifier by approximately 0.2 dB for 1:1 and by 0.4 dB for 1:2 systems.

For example, a single thread 100W Ku-Band Compact Outdoor SSPA has a typical saturated output power of 50.0 dB (100W).

Placing two of the above amplifiers in a 1:1 redundant system configuration would reduce the typical system saturated output by 0.2 dB to 49.8 dB (96W).

Placing three of the above amplifiers in a 1:2 redundant system configuration would reduce the typical system saturated output by 0.4 dB to 49.6 dB (91W).

Actual system losses will vary based on the system options.

### L-Band Operation

Teledyne Paradise Datacom amplifiers are available with an integrated L-Band Block Up Converter. L-Band units utilize Teledyne Paradise Datacom's proprietary zBUC technology. Adding a zBUC<sup>®</sup> converter to an SSPA typically increases the gain by 2-4 dB. In addition:

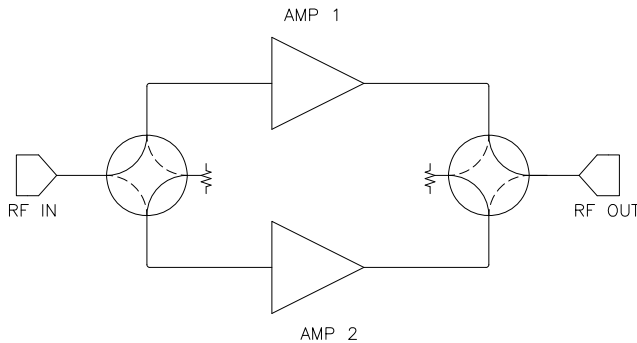

- the zBUC converter can detect and switch to an externally supplied reference.
- an optional internal high stability (10MHz) reference is available.
- the zBUC converter can lock to an externally supplied reference of 10 or 50 MHz.
- the zBUC converter can accept a wide range of external reference power (-10 to +5 dBm)
- the zBUC converter can accept FSK monitor and control signal via the IFL.

**1:1 Redundant HPA System**

**1:2 Redundant HPA System**

Teledyne Paradise Datacom's Outdoor Packaged Redundant Systems are designed with built-in redundancy for 1:1 systems. All system-level monitor and control is internal and no separate controller is required, although an optional RCP2-1100 1:1 Redundant System Controller is available. Either Ethernet or RS-485 communications are selectable for user monitor and control. All 1:2 redundant systems require a separate RCP2-1200 Redundant System Controller.

**RCP2-1100 1:1 Redundant System Controller**

**RCP2-1200 1:2 Redundant System Controller**

The RCP2-1200 1:2 Redundant System Controller is the heart of the 1:2 redundant system. It provides an extremely user friendly interface for complete monitor and control of the high power amplifiers. The front panel mimic display shows the on-line amplifiers and the current switch positions. Dedicated fault lights are provided for easy indication of system status.

All Redundant System Controller monitor and control is available locally, at the front panel LCD display, as well as remotely by the RS-232, RS-485 or Ethernet interface ports. Audible alarms and a full compliment of parallel I/O signal are available at the rear panel.
