

OVERVIEW

The low cost **QUANTUM Series PD20L** brings the *bandwidth saving* and *robustness* benefits of **DVB-S2** to traditional SCPC services such as IBS and Drop & Insert. In addition, **Paired Carrier** technology overlays transmit and receive carriers reducing satellite bandwidth by up to 50%. Paired Carrier™ technology is patented by Viasat Inc.

QUANTUM modems are fully backward compatible with Paradise Evolution modems when DVB-S2 and Paired Carrier are disabled.

Drop & Insert Option Specifications	
Parameter	QUANTUM Series Modem
Bearer Types	T1-D4, T1-ESF and E1-G.732
Timeslot Selection	Independent selection of arbitrary timeslots for both drop and insert.
Bearer Generation	The terrestrial bearer may be looped through the Drop Mux then Insert Mux, or terminated after the drop Mux and a new blank bearer generated by the insert Mux. The bearer generated within Insert Mux provides full multiframe and CRC support and may be generated from the Tx clock, station reference, satellite clock or internal reference.
Bearer Backup	In the event that Insert Mux bearer clock is lost, or AIS is supplied, then Insert Mux will switch temporarily to bearer generation mode in order to preserve receive traffic. The backup bearer may be generated from the station reference, satellite clock or internal reference.
Terrestrial CRC	Fully supported, with front panel display of terrestrial error rate based on CRC (T1-ESF and G.732) or Frame Alignment Word errors (all bearer types).
Timeslot ID	The IBS/SMS or Closed Net Plus ESC overhead maintains the identity of individual Drop/Insert timeslots for N=1,2,3,4,5,6,8,10,12,15,16, 20, 24 and 30. (See extended option below).

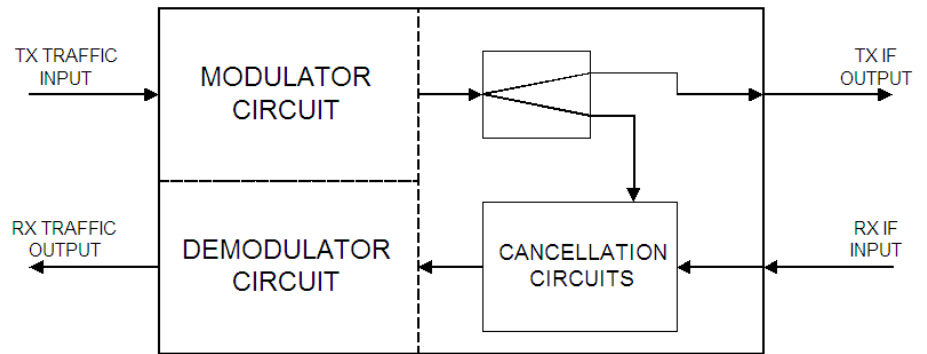

Advanced ESC and Advanced Aux Option Specifications

ESC/Aux Port	A single port provides the interface for optional high rate async ESC (IBS/SMS option or Closed Net Plus ESC) or the Intelsat low rate async IBS ESC channel.	
Electrical Interface	RS232, RS422 or RS485 external interfaces or internal link to remote M&C port (software selected). Other devices externally wired in parallel with M&C port can also be accessed remotely.	
Async ESC Option	Closed Net Plus ESC	Overhead scales to provide any user specified async ESC baud rate whatever the satellite data rate. ESC limit is approximately 70% of main channel rate, overhead varies from <0.5% to >70%.
	IBS Option	High rate async data using from 1/32nd to 22/32nd of the IBS overhead, providing async baud rates from 0.2% to 5.1% of the terrestrial rate (e.g., up to >2400 baud at 64kbps). Includes modes compatible with the P300 and P400 Series, P230 & P1300/P1361 (using 20/32nd of the overhead).
IBS Aux Data Channel	With IBS option and Advanced Aux option: Intelsat low rate async ESC definition carried in bit 1 of TS32 providing a synchronous channel at 1/480th of the data rate, allowing up to one quarter of this rate for over-sampled async data. Compliant with Intelsat IESS-403 low rate ESC definition.

Extended Drop & Insert Option Specifications	
Parameter	QUANTUM Series Modem
Timeslot Re-Ordering	Selected timeslots may be independently re-ordered on both Tx and Rx paths.
Multi-Destination Working	All or only a subset of the received data may be inserted into the terrestrial bearer on the receive path for multi-destination working.
Timeslot ID Maintenance	The IBS/SMS or Closed Net Plus ESC is extended to maintain the identity of individual timeslots for all values of N from 1 to 31.
Signalling	Both Channel Associated Signalling (CAS) and Robbed Bit Signalling (RBS) are fully supported. For G.732 Drop/Insert, CAS signalling is extracted from terrestrial TS16 and carried over the satellite in IBS/SMS TS16 and TS48 before re-inserting into the distant terrestrial TS16. For RBS, the IBS or Closed Net Plus ESC overheads maintain the identity of the in-band signalling and it is re-inserted into the terrestrial multi-frame in the correct positions to maintain the RBS.

Paired Carrier	
Parameter	QUANTUM Series Modem
Paired Carrier	Transmit and receive carriers are overlaid on top of each other in the same space segment. Echo cancellation techniques are used in the demodulator to cancel the transmit carrier and extract the wanted receive carrier signal.
Paired Carrier data rate options	512kbps, 1024kbps, 2.5Mbps, 5Mbps, 10Mbps, 15Mbps and 20Mbps traffic rate

Intelsat Reed-Solomon Codec & Custom Option Specifications	
Parameter	QUANTUM Series Modem
Maximum traffic rate	10Mbps
Format	Concatenated Reed-Solomon outer codec to IESS-308/310.
Code Rate	Default n, k, t = (126, 112, 7) depth 4. Automatically switches to: (225, 205, 10) depth 4 for 1544kbps IDR mode or (219, 201, 9) depth 4 for 2048kbps IDR mode and TCM=<=1544kbps or (219, 201, 9) depth 8 for TCM >1544kbps.
Processing Delay (bits)	Combined encoder and decoder: 8 x (2n-k+60) Combined Interleaver/De-Interleaver: 8 x n x Depth Calculate delay time using data rate including RS overhead.
Custom Option	When fitted allows arbitrary selection of n and k to provide fully variable code rate. 60<=n<=255, (n-20)<=k<=(n-2) in steps of 2. Interleaver depth of 4 or 8. The custom option allows use of shorter code words to reduce interleaver/de-interleaver delay on low data rate circuits.

PAIRED CARRIER MODEM SCHEMATIC

Paired Carrier technology allows both the uplink and downlink signals to occupy the same space segment. An adaptive self-interference cancellation technique removes the uplink signal components generated by the local terminal from the received signal off satellite, allowing demodulation of the far end signal.

Ethernet Traffic	
Parameter	QUANTUM Series Modem
Standard (unaccelerated)	Base modem will pass UDP to at least 5Mbps (subject to prevailing data rate limits enabled in the modem) and unaccelerated TCP to typically 128kbps per connection, subject to an overall packet handling limit of 10,000 packets per second.
PEP (TCP/IP acceleration) Option	Performance Enhancing Protocol (acceleration) for TCP/IP traffic - overcomes performance problems associated with TCP over satellite. Maximum throughput on the base Modem 10Mbps.
Traffic mode	Bridging (standard) for point-to-point operation Brouting (Option) for point-to-multipoint and satellite outbound plus non-satellite return. Mesh network support. User selectable bridge between Ethernet traffic and Ethernet M&C port.
DHCP	Dynamic Host Control Protocol allows modem IP address to be allocated dynamically from an external DHCP network server.
Ethernet Header Compression	Compression of Ethernet frame headers at data rates up to 2Mbps. Typically reduces 14 byte Ethernet header to 1 byte.
IEEE 802.1p/q	IEEE 802.1p Quality of Service supporting the choice of strict priority queuing or fair weighting queuing. IEEE 802.1q VLAN support
IP Traffic card & options	Optional Encapsulation of IP packets and Ethernet frames over DVBS uses Multi Protocol Encapsulation (MPE), Ultra Lightweight Encapsulation (ULE) or super efficient Paradise eXtreme Encapsulation (PXE) protocols. Supports TCP acceleration with maximum throughput rates of 20Mbps, subject to compatible options in the host modem. Supports up to 5,000 concurrent TCP connections. Overcomes the inherent limitations of standard TCP/IP over satellite. Improves the bandwidth utilisation to approximately 90% of selected data rate, with acceleration on. Reduces the inefficiencies of the standard TCP slow start algorithm. Prevents unnecessary activation of TCP congestion control algorithm. Optional Robust Header Compression to RFC 3095 profile 2 (IP/UDP). Typical reduction in header size for IP/UDP is from 28 bytes to between 1 & 3 bytes. 1-way packet handling limit of 29,000 packets per second. 2-way packet handling limit of 22,000 packets per second. Includes Ethernet header compression which typically reduces the 14 byte Ethernet header to 1 byte. Optional Dynamic Routing, supports RIP, OSPF and BGP, plus 64 static routes. Dual RJ45 ports support 10/100/1000 BaseT Ethernet. Improves security by separating IP Traffic from Ethernet remote M&C on chassis.
